PLUST Collection was launched in 2006 as a design brand of europlast spa, a leading manufacturer of vases and plastic accessories distributed worldwide. The company boasts a certified management system and all its products are Made in Italy.

Under the art direction of JoeVelluto (MIL) design studio and in collaboration with renowned national and international designers, PLUST Collection develops systems that meet the various requirements of indoor e outdoor spaces. Furnishes, luminous objects, and vases decorate indoor and outdoor spaces whilst enhancing their functions and promoting sociability.

The in-house manufacturing process allows for continuous investigation of plastic and its processing technologies, thereby ensuring the highest quality and the development of innovative products that meet the requirements of both contract furniture suppliers (thanks to tailor-made services) and private customers.

PLUST Collection products are made with the robotmoulding technique. High quality machining and respect for the environment have allowed PLUST Collection to obtain certifications, which guarantee that the highest quality and safety standards are met, as well as important recognitions for its innovative production systems.

For PLUST Collection, the essence of a product lies in its versatility. Wear resistance is reliability, lightness is comfort, and aesthetics is pleasure.
